

COLOUR OF A DIAMOND

D

Exceptional
White +

The Exceptional White (+) diamond with a grade of D is the very rarest of the diamond colour range. The diamond will be completely colourless. This makes it the most valuable coloured diamond.

E

Exceptional
White

The Exceptional White diamond with a grade of E is also very rare. The difference between D and E is hard to detect when compared. This diamond is graded colourless. This also makes it very valuable.

F

Rare White +

The Rare White (+) diamond is the third highest coloured graded diamond achievable. Its graded F as the diamond is colourless when viewed through the crown.

G

Rare White

The Rare White is a fine alternative to the top three colour grades. This colour still makes for an outstanding diamond. Its grade of G is colourless when viewed through the crown.

H

White

The White coloured diamond has a small noticeable colour difference when compared to the top 4 colour grades. Its grade of H is colourless when viewed through the crown.

I

Slightly
Tinted

The Slightly Tinted White is a great starting point if you're buying a diamond on a budget. The colour difference is still very slight making it hard to tell the difference when compared to other grades. Its grade of I is slightly coloured.

J

Slightly
Tinted White

Still only slightly tinted but this J grade diamond is normally the cut off point for many retail diamond stores. The J grade still offers great value for money and is also near colourless.

COLOURLESS

NEAR COLOURLESS
